

SAMPLE Question MCQ						
Subject Name: Advance Distributed Computing				Semester: V		
Sr. No.	Question	Module No.	Option a	Option b	Option c	Option d
1	_____ is the example of Workstation–Server Model	1	Aarpa Net	V-System	V Net	motorola net
2	_____ is affect or be affected by the other processes executing in the system.	1	Cooperating process	Independent Process	Distributed Process	Centralised Process
3	If one site fails in distributed system then _____	1	indirectly connected systems will stop working	the remaining sites can continue operating	all the sites will stop working	directly connected sites will stop working
4	Lamport established a relation termed as _____ relation.	2	happens-before	happens-after	FCFS	JCF
5	UTC accuracy is _____ seconds	2	0.8	0.1	0.5	0.2
6	In computer clock _____reinitialize counter register when its value becomes zero & an interrupt is generated.	2	timer register	constant register	Counter register	Crystal
7	In Ricart & Agrawala’s Algorithm _____ contains Process identifier, Name of CS and Unique time stamp.	2	receive message	acknowledge message	response message	request message
8	What is NUMA?	3	NON Uniform Memory Access	NON Universal Mapping Access	Network Uniform Memory Access	NON Uniform Mapping Access
9	in _____ model modifications are not sent to other nodes at the time of release.	3	Sequential Consistency	Pipelined Random Access Memory (PRAM) Consistency	Strict (Atomic) Consistency	Lazy Release Consistency

10	What is NUMA?	3	NON Universal Mapping Access	NON Uniform Mapping Access	Network Uniform Memory Access	NON Uniform Memory Access
11	when two processes access two unrelated variables that reside in same data block is called _____	3	Segmentation	Paging	False sharing	Trashing
12	_____ computing facilitates utility computing, especially where redundant services can be used to achieve fault tolerance.	4	on-demand	Service-oriented	Product-oriented	cluster
13	The following are written by CORBA architects or developers:	4	client and the server	Sender receiver	Stub skeleton	Object adapter
14	In _____ Process starts executing at destination before the address space is migrated.	4	message Forwarding	Total Freezing	Pretransferring	Transfer-on Reference
15	Fault tolerance means	4	should be capable of handling small as well as large networks	all processes should get the same quality of service	Should be capable of working after the crash of one or more nodes of the system	detecting fault in the system
16	CORBA stands for	4	Cooperative Object Request Broker Architecture	Common Operating Request Broker Architecture	Common Object Request Broker Architecture	Common Object Request Broker Administration
17	To increase the throughput and response time of the system especially when there are lots of smaller queries, which type of parallelism is most likely to perform better?	5	Inter-query parallelism	inter-operation parallelism	Intra-operation parallelism	Intra-query parallelism

18	_____ can be considered as a subroutine in the main program	5	code	thread	process	function	
19	_____ leads to concurrency.	5	Serialization	Distribution	Parallelism	Serial processing	
20	SCA stands for	6	Ssystem Component Architecture	Service Component Architecture	System Component Administration	Service Command Architecture	
21	A _____ is shared among two or more organizations that have similar cloud requirements	7	private cloud	community cloud	open cloud	public cloud	
22	_____ is a complete operating environment with applications, management and the user interface	7	IaaS	SaaS	PaaS	NaaS	
23	_____ serves as a PaaS vendor within Google App Engine system	7	Google	Microsoft	Salesforce	AMAZON	
24	PaaS stands for	7	Platform as a service	Procedure as a Service	Program as a service	Programming services	
25	Private cloud is owned by _____ organization	7	two	three	one	many
